 Easy Cyber Protection  
"Hidden Gem"

*'I just found a place nobody's talking about yet.'*  
*'Good. Don't tell your brother.'*

## THE CONTEXT

# NIS2 is here. **4,000+** Belgian organisations have registered – and their suppliers too.

The EU's NIS2 directive requires thousands of entities – hospitals, municipalities, utilities, and their supply chain – to prove cybersecurity compliance. In Belgium, that means the **CyberFundamentals (CyFun) framework** from the Centre for Cybersecurity Belgium (CCB).

Self-assessment starts April 2026. CAB certification audit by April 2027. Suppliers need to demonstrate CyFun Basic readiness too.

## 4,000+

Belgian organisations registered for NIS2

## Zero

Existing tools built on CyFun

## THE SOLUTION

# Audit-readiness as a service. Delivered through MSPs.

Most SMEs will turn to their trusted IT partner — their Managed Service Provider (MSP) — when they need to comply. Easy Cyber Protection gives MSPs a white-label platform to guide clients step-by-step toward CyFun audit-readiness.

No compliance expertise required. The platform explains every control in plain language and collects evidence with structured checklists.

### CyFun-native

Every tier, every control, every Belgian translation — built in

### White-label

MSPs deliver under their own brand. Their logo, their reports.

### Local-first storage

Client data stays on their device. Never stored in our cloud.

### Built-in awareness

Weekly micro-learnings in Dutch and French, branded per MSP.

## HOW IT WORKS

# Six steps from onboarding to audit-ready.

### 1. MSP signs up

Gets a branded portal with their logo and domain.

### 2. Client assessment

Guided assessment determines which CyFun tier applies.

### 3. Controls mapped

Platform maps required controls, explains each in plain language.

### 4. Evidence collection

Client collects proof with step-by-step guidance and checklists.

### 5. Progress tracking

Dashboard shows exactly which controls are done and what's next.

### 6. Audit-ready

All evidence collected, reports generated. CAB audit becomes a formality.

Client spends 30 minutes per week. MSP spends 30 minutes per client per week. The platform does the rest.

## COMPETITIVE POSITIONING

# Built for this. Not bolted on.

CAPABILITY	EASY CYBER PROTECTION	GENERIC GRC TOOLS	CONSULTANTS
<b>CyFun / NIS2 native</b>	<b>First and only</b>	NIS2 as one of many	<b>Manual mapping</b>
Data residency	<b>Local-first (client device)</b>	Vendor cloud	No platform
Target channel	<b>MSPs (white-label)</b>	Direct to enterprise	Direct to enterprise
Compliance expertise needed	<b>No</b>	Often yes	Outsourced
Belgian language support	<b>NL / FR / EN</b>	Mostly EN	Varies

CyFun is expanding internationally: formally adopted by Romania, co-owned by Ireland, under evaluation by France, Portugal, and Croatia.

## BUSINESS MODEL

# Simple per-client pricing. You set your price, you keep the margin.

## €25

flat per client/month — everything included

## €50–250

suggested MSP charge to client

## 50–90%

MSP margin

### Example

50 clients × €75 margin = €3,750/month (€45K/year)

For comparison: a consultant charges €15,000 per engagement, Cynomi starts at \$15K+, and Cyberday costs €250+/month per organisation.

The CCB's own retroanalysis shows CyFun Basic counters 82% of successful attacks, Important 94%, Essential 100%.

## ABOUT

# Founder & key facts

## Tom Janssens

### Founder

20+ years enterprise IT, including Eurocontrol. 10 years running a B2B SaaS company. Recent interim CIO at a €250M PE-backed automotive parts company. Member of the Belgian Cyber Security Coalition.

### Company

Easy Cyber Protection  
(brand of Core bv, BE 0861.455.911)

### Founded

2025

### HQ

Belgium

### Framework

CCB CyberFundamentals (cyfun.eu)

### Languages

Dutch, French, English

### Status

Early-stage, onboarding MSP partners
